

A CLOSER LOOK AT Emotional Health for Babies and Toddlers

WHAT IS EMOTIONAL HEALTH?

Emotional health is learning how to express and manage feelings, learning about other people and yourself, and developing a sense of belonging within community and culture. It is the key to future development for children at every age.

By protecting early emotional health, children become more resilient to stress and are less likely to develop mental health problems down the road.

INVESTING IN EMOTIONAL HEALTH

As our healthcare systems increase focus on disease prevention, we can benefit from a similar approach for the emotional health of babies and toddlers.

Investment in emotional health has proven returns for all stages of development. ★ **Prioritizing it means funding the needs of caregivers, so they can be responsive, nurturing, stable and safe for those they care for. These relationships are the most effective intervention to help children thrive.** ★

POSITIVE RELATIONSHIPS ARE THE FOUNDATION FOR EMOTIONAL HEALTH

Of all the factors that are important to the health and well-being of infants and young children, including nutrition, sleep, learning, etc., relationships are the most important. Early relationship experiences shape brain development and influence all future relationships.

Promoting adult wellbeing and reducing family stressors is essential to ensuring caregivers can provide responsive, nurturing, stable and safe relationships for children to develop.

These supports benefit children's health and success as they grow. They also benefit caregivers, by alleviating distress and fostering healing.

EVERYDAY ACTIONS MATTER

Think about everyday actions you can take to support caregivers and their children at work and at home. What can you do to support families in your community?

From volunteer service to individual acts of kindness, every day actions can improve your own and others' emotional health.

WHAT'S MY ROLE AS A HEALTH CARE PROVIDER?

There are many ways you can support emotional health, and it starts with building up parents/caregivers:

- Caregivers need you to advocate for them in a system that is often challenging
- Create time to hear parent and caregiver concerns and recognize they are the expert on their children
- Talk to caregivers about how their wellbeing (i.e. caregiver depression screenings) may be impacting the child and offer support accessing additional services
- Be strengths-based and build a strong relationship with parents and caregivers
- Proactively help find solutions to reduce stressors at the family level
- Center anti-racist, anti-biased and culturally humble values
